Section 24: Live Births (partners)

[Generate a Live Births Data Set (LBDS), containing one record for each live birth reported in: (1) the variable RPNB in the Recent Pregnancies Data Set, and (2) the variable OPNB in the Old Pregnancies Data Set, with the constraint that, if RPNB > 2 or OPNB > 2, generate only two records. Store in BRELNO the value of RRELNO or ORELNO, as appropriate, and in BSOURCE an R if the record came from the RPDS, an O if it came from the OPDS. Copy into BPARTNER the value of RPARTNER or OPARTNER, as appropriate; into BPEMTH, the value of RPEMTH or OPEMTH, as appropriate; into BPEYR, the value of RPEYR or OPEYR; into SOURCENO, the value of RPNO or OPNO. Store a 1 in NUMBERB if the RPNB or OPNB value equals 1, a 2 if it is greater than 1. Store in BPEMTHN the numeric equivalents of BPEMTH values, and in BPEMTHT the complete month names. Sort the records by BPEYR and by BPEMTHN. Assign consecutive values of BPNO to the records. Store the highest value of BPNO in AGGIE. If AGGIE < 1, skip to Section 22.]

The next questions are about the live {BIRTH/ BIRTHS} you have reported. *[If any pertinent RPNB or OPNB value > 2, add: "We realize that a multiple birth can be the birth of three or even more children at one time, not just the birth of twins. Nevertheless, in this interview we will ask about only two children in any multiple birth. If {<PARTNER>/YOU} in fact gave birth to triplets or quadruplets, and this were recorded in the data set, the rarity of the event would make it difficult to safeguard {HER AND YOUR/YOUR AND YOUR PARTNER'S} confidentiality."]*

[For each record in the LBDS, ask Q.1 to Q.14.]

Display the Live Births Data Set (LBDS).

For each record in the LBDS, ask:
    Is this the correct birth date of your {BABY/ FIRST BABY/ SECOND BABY}?
    If yes, skip to the next child listed.
If no, ask:
    What is the correct birth date of your {BABY/ FIRST BABY/ SECOND BABY}?

Have the interviewer correct the date and continue to the next child.
