National Longitudinal Study of Adolescent to Adult Health

Contextual Wave IV Database

Acknowledgments

Add Health is a program project directed by Kathleen Mullan Harris and designed by J. Richard Udry, Peter S. Bearman, and Kathleen Mullan Harris at the University of North Carolina at Chapel Hill, and funded by grant P01-HD31921 from the Eunice Kennedy Shriver National Institute of Child Health and Human Development, with cooperative funding from 23 other federal agencies and foundations. Work on the contextual data linkage was supported by grants to Taylor Hargrove and Lauren Gaydos (R21HD095448 and R24AG045061) from the Eunice Kennedy Shriver National Institute of Child Health and Human Development, the National Institute on Aging, and the Network on Life Course Health Dynamics and Disparities. Information on how to obtain the Add Health data files is available on the Add Health website (<http://www.cpc.unc.edu/addhealth>).

Introduction

This contextual database further expands the extensive contextual data currently available to users of the National Longitudinal Study of Adolescent to Adult Health (Add Health) through the provision of numerous measures reported by the U.S. Census Bureau's American Community Survey (ACS) and the U.S. Climate Atlas. The data provide an important update to the contextual variables already available in Wave IV by including information at the state- and county-levels. Additionally, there are a few new variables in the present database that are absent from other waves. This data release increases the possibilities and quality of the contextual analyses that researchers may conduct using Add Health by permitting various longitudinal analyses of significant socio-economic and geographic characteristics defining the environments in which Add Health respondents lived during Waves I through V. Most of the variables included in this contextual data file measure context at the census state- and county-levels.

Data Structure and Form

The contextual data file contains one observation for each respondent in the Wave IV Add Health survey. The first variable is the respondent identifier (the AID), which permits merging these contextual data with other Add Health data files. Except for AID, each measure is numeric. For the Context4 move distance variable, consult Tract4. Location identifiers in Context4 are based on 2010 Census geographic boundaries.

Variable order in the data reflects the order of presentation in the DATA DICTIONARY.

Variable Naming Conventions

With the exception of AID, all variables in the contextual data file adhere to the following nomenclature:

1st character – Summary level of the variable.

Refers to the geographic area to which the variable corresponds. Geographic levels include:

C = County

Add Health is directed by Robert A. Hummer and funded by the National Institute on Aging (U01 AG071448 to Robert A. Hummer, and U01AG071450 to Allison E. Aiello and Robert A. Hummer) at the University of North of North Carolina at Chapel Hill. We use data from the Add Health Program Project, grant P01 HD31921 (Harris) from Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), with cooperative funding from 23 other federal agencies and foundations. Add Health was designed by J. Richard Udry, Peter S. Bearman, and Kathleen Mullan Harris at the University of North Carolina at Chapel Hill.

S = State

N = Nearest climate station

One factor researchers must keep in mind when conducting longitudinal analyses is that administrative boundaries may have changed between 1990 and 2010. Thus changes observed may, in part, be due to changes in these boundaries. This Wave IV contextual database reports measures based on the 2000 census boundaries. Wave I and II contextual databases, however, provide data based on 1990 boundaries and the Wave V data based on 2010 census boundaries.

Unlike other measures, the Climate variables are not based on geographic boundaries, but rather the nearest climate station in the United States. For more information, see the description of the 1980-2010 Climate Atlas of the United States in the DATA SOURCE section of this document.

2nd and 3rd characters – Original data source.

The 2nd and 3rd characters are abbreviations representing the original sources of data, or other secondary sources, from which the constructed variables were derived. Additional detail about these sources is available in the SOURCE INDEX. The sources and their abbreviations include:

AC 2009 American Community Survey 5-Year Estimates

CA 1981-2010 U.S. Climate Atlas

4th and 5th characters – Year of data.

These digits refer to the year that the variable represents. For instance, the year 2009 is denoted as 09. The names of period estimates specify the last year of data comprising the range. For example, the American Community Survey's 5-year estimates span 2005-2009 and, therefore, have a "09" as the 4th and 5th characters.

6th through 8th characters – Variable number.

The last three characters report the variable number within this Add Health database. Variable numbers range sequentially from 001 to 138. Note that some gaps in the numbering occur as a result of aligning these data with the previously released TRACT4 contextual data file.

Data Dictionary

The table below lists the whole set of variables comprising this Add Health contextual database. The 2005-2009 American Community Survey 5-year data appear first, followed by measures derived from the 1981-2010 U.S. Climate Atlas. A formula or short description is presented in the final column in order to provide users variable construction specifics.

Table 1: Contextual Variables Based on ACS Five Year Estimates (2005-2009)

Name	Description	Formula
Population		
C/S AC09001	Total population	B01003_001E
C/S AC09002	Density — persons per square km	B01003_001E/AREALAND
Race and Ethnic Background		
C/S AC09003	Proportion White alone	B02001_002E/B01003_001E
C/S AC09004	Proportion Black or African American alone	B02001_003E/B01003_001E
C/S AC09005	Proportion American Indian and Alaska Native alone	B02001_004E/B01003_001E
C/S AC09006	Proportion Asian alone, Native Hawaiian and other Pacific Islander	(B02001_005E+B02001_006E)/B01003_001E
C/S AC09007	Proportion some other race alone	B02001_007E/B01003_001E
C/S AC09008	Proportion two or more races	B02001_008E/B01003_001E
C/S AC09009	Proportion Hispanic or Latino:	B03002_012E/B03002_001E
C/S AC09010	Proportion Hispanic or Latino and White alone	B03002_013E/B03002_001E
C/S AC09011	Proportion Hispanic or Latino and Black alone	B03002_014E/B03002_001E
C/S AC09012	Proportion Hispanic or Latino and American Indian or Alaska native alone	B03002_015E/B03002_001E

Add Health is directed by Robert A. Hummer and funded by the National Institute on Aging (U01 AG071448 to Robert A. Hummer, and U01AG071450 to Allison E. Aiello and Robert A. Hummer) at the University of North of North Carolina at Chapel Hill. We use data from the Add Health Program Project, grant P01 HD31921 (Harris) from Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), with cooperative funding from 23 other federal agencies and foundations. Add Health was designed by J. Richard Udry, Peter S. Bearman, and Kathleen Mullan Harris at the University of North Carolina at Chapel Hill.

C/S AC09013	Proportion Hispanic or Latino and Asian or Pacific Islander alone	$(B03002_016E+B03002_017E)/B03002_001E$
C/S AC09014	Proportion Hispanic or Latino and some other race alone	$B03002_018E/B03002_001E$
C/S AC09015	Proportion Hispanic or Latino and two or more races	$B03002_019E/B03002_001E$
Age Structure		
C/S AC09016	Proportion 0 to 4 years of age	$(B01001_003E+B01001_027E)/B01003_001E$
C/S AC09017	Proportion 5 to 9 years of age	$(B01001_004E+B01001_028E)/B01003_001E$
C/S AC09018	Proportion 10 to 14 years of age	$(B01001_005E+B01001_029E)/B01003_001E$
C/S AC09019	Proportion 15 to 17 years of age	$(B01001_006E+B01001_030E)/B01003_001E$
C/S AC09020	Proportion 18 to 24 years of age	$(\sum_{i=7...10}[B01001_00iE]+\sum_{i=31...34}[B01001_00iE])/B01003_001E$
C/S AC09021	Proportion 65 to 74 years of age	$(\sum_{i=20...22}[B01001_00iE]+\sum_{i=44...46}[B01001_00iE])/B01003_001E$
C/S AC09022	Proportion 75 years of age or older	$(\sum_{i=23...25}[B01001_00iE]+\sum_{i=47...49}[B01001_00iE])/B01003_001E$
C/S AC09023	Proportion males ages 18-24 all races	$\sum_{i=7...10}[B01001_00iE]/B01003_001E$
C/S AC09024	Proportion females ages 18-24 all races	$\sum_{i=31...34}[B01001_00iE]/B01003_001E$
C/S AC09025	Proportion males 18-24 White alone	$(B01001A_007E+B01001A_008E)/B01003_001E$
C/S AC09026	Proportion females 18-24 White alone	$(B01001A_022E+B01001A_023E)/B01003_001E$
C/S AC09027	Proportion males 18-24 Black or African American alone	$(B01001B_007E+B01001B_008E)/B01003_001E$
C/S AC09028	Proportion females 18-24 Black or African American alone	$(B01001B_022E+B01001B_023E)/B01003_001E$
C/S AC09029	Proportion males 18-24 American Indian or Alaska native alone	$(B01001C_007E+B01001C_008E)/B01003_001E$
C/S AC09030	Proportion females 18-24 American Indian or Alaska native alone	$(B01001C_022E+B01001C_023E)/B01003_001E$
C/S AC09031	Proportion males 18-24 Asian or Pacific Islander alone	$(\sum_{i=D,E}[B01001i_007E+B01001i_008E])/B01003_001E$

Add Health is directed by Robert A. Hummer and funded by the National Institute on Aging (U01 AG071448 to Robert A. Hummer, and U01AG071450 to Allison E. Aiello and Robert A. Hummer) at the University of North of North Carolina at Chapel Hill. We use data from the Add Health Program Project, grant P01 HD31921 (Harris) from Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), with cooperative funding from 23 other federal agencies and foundations. Add Health was designed by J. Richard Udry, Peter S. Bearman, and Kathleen Mullan Harris at the University of North Carolina at Chapel Hill.

C/S AC09032	Proportion females 18-24 Asian or Pacific Islander alone	$(\sum i=D,E[B01001i_022E+B01001i_023E])/B01003_001E$
C/S AC09033	Proportion males 18-24 some other race alone	$(B01001F_007E+B01001F_008E)/B01003_001E$
C/S AC09034	Proportion females 18-24 some other race alone	$(B01001F_022E+B01001F_023E)/B01003_001E$
C/S AC09035	Proportion males 18-24 two or more races	$(B01001G_007E+B01001G_008E)/B01003_001E$
C/S AC09036	Proportion females 18-24 two or more races	$(B01001G_022E+B01001G_023E)/B01003_001E$
C/S AC09037	Proportion males 18-24 Hispanic or Latino	$(B01001I_007E+B01001I_008E)/B01003_001E$
C/S AC09038	Proportion females 18-24 Hispanic or Latino	$(B01001I_022E+B01001I_023E)/B01003_001E$
C/S AC09039	Proportion males 18-24 White alone Non-Hispanic or Latino	$(B01001H_007E+B01001H_008E)/B01003_001E$
C/S AC09040	Proportion females 18-24 White alone Non-Hispanic or Latino	$(B01001H_022E+B01001H_023E)/B01003_001E$
Household and Family Types		
C/S AC09041	Proportion occupied housing units married-couple family with own children under 18	$(B25115_005E+B25115_018E)/B25115_001E$
C/S AC09042	Proportion occupied housing units female householder with own children under 185	$(B25115_012E+B25115_025E)/B25115_001E$
C/S AC09043	Proportion occupied housing units male householder with own children under 185	$(B25115_009E+B25115_022E)/B25115_001E$
C/S AC09044	Proportion occupied housing units nonfamily5	$(B25115_014E+B25115_027E)/B25115_001E$
C/S AC09045	Proportion families with own children headed by female householder	$B11003_016/(B11003_003+B11003_010+B11003_016)$

Add Health is directed by Robert A. Hummer and funded by the National Institute on Aging (U01 AG071448 to Robert A. Hummer, and U01AG071450 to Allison E. Aiello and Robert A. Hummer) at the University of North of North Carolina at Chapel Hill. We use data from the Add Health Program Project, grant P01 HD31921 (Harris) from Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), with cooperative funding from 23 other federal agencies and foundations. Add Health was designed by J. Richard Udry, Peter S. Bearman, and Kathleen Mullan Harris at the University of North Carolina at Chapel Hill.

C/S AC09046	Proportion families with own children headed by male householder	$B11003_010 / (B11003_003 + B11003_010 + B11003_016)$
C/S AC09047	Proportion of population 15 years and over divorced or separated	$(\sum_{i=07,10,16,19} [B12001_0iE]) / B12001_001E$
Linguistic Isolation, Foreign Born		
C/S AC09048	Proportion households linguistically isolated	$(\sum_{i=04,07,10,13} [B16002_0iE]) / B16002_001E$
C/S AC09049	Proportion foreign born	$B05012_003E / B05012_001E$
Educational Attainment		
C/S AC09050	Proportion 25 years and over with less than high school diploma	$(\sum_{i=03,...,10, 20,...,27} [B15002_0iE]) / B15002_001E$
C/S AC09051	Proportion 25 years and over with bachelor's degree or more	$(\sum_{i=15,...,18, 32,...,35} [B15002_0iE]) / B15002_001E$
Labor Force and Employment Status		
C/S AC09052	Unemployment rate all persons 16 years and over	$\sum_{i=08,15,22,29,36,43,50,57,64,71,76,81,86,94,101,108,115,122,129,136,143,150,157,162,167,172} [B23001_0iE] / \sum_{j=07,08,14,15,21,22,28,29,35,36,42,43,49,50,56,57,63,64,70,71,75,76,80,81,85,86,93,94,100,101,107,108,114,115,121,122,128,129,135,136,142,143,149,150,156,157,161,162,166,167,171,172} [B23001_0jE]$
C/S AC09053	Unemployment rate males 16 years and over	$(\sum_{i=08,15,22,29,36,43,50,57,64,71,76,81,86} [B23001_0iE]) / (\sum_{j=07,08,14,15,21,22,28,29,35,36,42,43,49,50,56,57,63,64,70,71,75,76,80,81,85,86} [B23001_0jE])$
C/S AC09054	Unemployment rate females 16 years and over	$(\sum_{i=94,101,108,115,122,129,136,143,150,157,162,167,172} [B23001_0iE]) / (\sum_{j=93,94,100,101,107,108,114,115,121,122,128,129,135,136,142,143,149,150,156,157,161,162,166,167,171,172} [B23001_0jE])$
C/S AC09055	Labor force participation rate males 16 years and over	$(\sum_{i=04,11,18,25,32,39,46,53,60,67,74,79,84} [B23001_0iE]) / B23001_002E$
C/S AC09056	Labor force participation rate females 16 years and over	$(\sum_{i=90,97,104,111,118,125,132,139,146,153,160,165,170} [B23001_0iE]) / B23001_088E$

Add Health is directed by Robert A. Hummer and funded by the National Institute on Aging (U01 AG071448 to Robert A. Hummer, and U01AG071450 to Allison E. Aiello and Robert A. Hummer) at the University of North of North Carolina at Chapel Hill. We use data from the Add Health Program Project, grant P01 HD31921 (Harris) from Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), with cooperative funding from 23 other federal agencies and foundations. Add Health was designed by J. Richard Udry, Peter S. Bearman, and Kathleen Mullan Harris at the University of North Carolina at Chapel Hill.

C/S AC09057	Among children under 6 living with two parents, Proportion with both parents in the labor force	B23008_004E/B23008_003E
C/S AC09058	Among children 6 to 17 living with two parents, Proportion with both parents in the labor force	B23008_017E/B23008_016E
C/S AC09059	Proportion white alone males 16 years and over unemployed	(C23002A_08E+C23002A_13E)/(C23002A_06E+C23002A_11E)
C/S AC09060	Proportion White alone females 16 years and over unemployed	(C23002A_21E+C23002A_26E)/(C23002A_19E+C23002A_24E)
C/S AC09061	Proportion Black or African American alone males 16 years and over unemployed	(C23002B_08E+C23002B_13E)/(C23002B_06E+C23002B_11E)
C/S AC09062	Proportion Black or African American alone females 16 years and over unemployed	(C23002B_21E+C23002B_26E)/(C23002B_19E+C23002B_24E)
C/S AC09063	Proportion American Indian or Alaska native alone males 16 years and over unemployed	(C23002C_08E+C23002C_13E)/(C23002C_06E+C23002C_11E)
C/S AC09064	Proportion American Indian or Alaska native alone females 16 years and over unemployed	(C23002C_21E+C23002C_26E)/(C23002C_19E+C23002C_24E)
C/S AC09065	Proportion Asian or Pacific Islander alone males 16 years and over unemployed	(C23002D_08E+C23004E_13E)/(C23002D_06E+C23002E_11E)
C/S AC09066	Proportion Asian or Pacific Islander alone females 16 years and over unemployed	(C23002D_21E+C23002E_26E)/(C23002D_19E+C23002E_24E)
C/S AC09067	Proportion some other race alone males 16 years and over unemployed	(C23002F_08E+C23002F_13E)/(C23002F_06E+C23002F_11E)
C/S AC09068	Proportion some other race alone	(C23002F_21E+C23002F_26E)/(C23002F_19E+C23002F_24E)

Add Health is directed by Robert A. Hummer and funded by the National Institute on Aging (U01 AG071448 to Robert A. Hummer, and U01AG071450 to Allison E. Aiello and Robert A. Hummer) at the University of North of North Carolina at Chapel Hill. Missing codes

Though the US Census uses sequences of nines to denote values falling into the lowest category of an open-ended distribution (e.g., 9999 indicating less than 10,000) and a terminal digit of 1 to denote values that fall into the highest category of an open-ended distribution (e.g., 1000001 indicating more than 1,000,000), Add Health top- and bottom-coded variables independently of the U.S. Census Bureau.

Add Health is directed by Robert A. Hummer and funded by the National Institute on Aging (U01 AG071448 to Robert A. Hummer, and U01AG071450 to Allison E. Aiello and Robert A. Hummer) at the University of North of North Carolina at Chapel Hill. We use data from the Add Health Program Project, grant P01 HD31921 (Harris) from Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), with cooperative funding from 23 other federal agencies and foundations. Add Health was designed by J. Richard Udry, Peter S. Bearman, and Kathleen Mullan Harris at the University of North Carolina at Chapel Hill.

Three missing data codes are used in Wave IV contextual files. They are as follows:

Value	Reason for missing data
96 (or 996, 9996, ...99996)	Missing in the source data
98 (or 998, 9998, ...99998)	Geocode missing

The replacement codes of 96, 996, etc. indicate that data were not available for that particular variable, year, and/or summary level from the original source data. See the source notes for more information. A value of 98, 998, etc. indicates that the geocode is missing for that respondent at Wave IV.

Source Description

This subsection describes each one of the sources used for the generation of the contextual variables comprising the data file; in the cases where it applies, a sub-directory of the variables used for the generation of the contextual information is presented; in other cases, an explanation about the generation of the variables is provided.

AC 2018 American Community Survey 5-Year Estimates
CA Climate Atlas of the United States

AC 2009 American Community Survey 5-Year Estimates

The American Community Survey (ACS) is a household survey conducted by the U.S. Census Bureau. The annual sample size of the survey is about 3 million addresses. An annual ACS represents a sample of 2.5% of the U.S. population; nevertheless, at the end of a five year round, the cumulated sample is 12.5% of the U.S. population. Starting in 2006, with 2005 survey data, the ACS began releasing 1-year estimates every year; starting in 2008, with the addition of 2006 and 2007 data, it released 3-year estimates every year; and starting in 2010, with 2005 through 2009 data, it released 5-year estimates every year. All the ACS derived variables in these Add Health data are based on the 2009 ACS 5-Year Estimate Summary File. This file contains information on a wide range of topics that cover various demographic, social, and economic characteristics defining population and housing.

Concern has arisen over inconsistency between the 2000 Census and 2009 ACS 5-year data and the deleterious effect such differences may have on the latter's estimate quality. Indeed, although the ACS provides data similar to that collected by the long-form of the decennial census, some fundamental distinctions between the two data sources exist. The nature, perhaps more so than the extent, of these changes may warrant viewing the ACS as a new survey distinct from the traditional U.S. Census data used in constructing Add Health's CONTEXT1, CONTEXT2, and CONTEXT3 data files. In fact, use of the word "replacement" has received critical attention, for it erroneously implies the interchangeability between the ACS and Census long-form¹. Some differences relevant to this Add Health release involve: sample size, the nature of period estimates, residence rules, reference periods, and definitions.

The CONTEXT4 data, however, function as a supplement to the TRACT4 file, which also uses 2009 ACS 5-year estimates. Therefore, CONTEXT4 and TRACT4 data are compatible.

Sample Size

The ACS' annual sample consists of 1 in 40 households, instead of the decennial census' 1 in 6. Please consult the "2009 ACS, 5-Year Estimate Margin of Error" section of the DATA DICTIONARY for information regarding the difference in sample size between the decennial census and the ACS and the impact of this on the estimate quality of the latter.

Period Estimates

ACS data products are period estimates that compile 12, 36, and 60 months of data for 1-year, 3-year, and 5-year periods, respectively¹. This method of continuous measurement precludes using ACS data as a point estimate, which renders the variables somewhat less intuitive temporally. For example, the 2009 ACS 5-year data measure the period of 2005 to 2009. That is, they do not measure year 2005, year 2009, or the midpoint between 2005 and 2009, but rather, the entire span. A limitation of period estimates rests in their inability to detect major fluctuations within the time span measured. Period estimates tend to smooth curves of change. For example, 3-year estimates of an area experiencing high migration rates in one latter year may only show a moderate increase in migration, because estimates measuring migration prior to the increase will mitigate the measured population growth¹. This limitation may function as an asset to researchers seeking a general description of Add Health respondents' environments in the period of time preceding the Wave IV in-home interview.

Residence Rules

The ACS residence rule requires data collected on anyone "living or staying" at an address for more than 2 months; whereas, the decennial long-form obtains data on anyone who "usually" lives at a given address as of April 1st of a census year. This discrepancy in rules results from the disparate goals of the U.S.

Add Health is directed by Robert A. Hummer and funded by the National Institute on Aging (U01 AG071448 to Robert A. Hummer, and U01AG071450 to Allison E. Aiello and Robert A. Hummer) at the University of North of North Carolina at Chapel Hill. We use data from the Add Health Program Project, grant P01 HD31921 (Harris) from Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), with cooperative funding from 23 other federal agencies and foundations. Add Health was designed by J. Richard Udry, Peter S. Bearman, and Kathleen Mullan Harris at the University of North Carolina at Chapel Hill.

decennial census and ACS, which further exacerbates differences in their samples. Increasing similarity to the decennial census sample, the ACS began surveying group quarters in 2006. As a consequence, the 2009 ACS 5-year data, which includes year 2005, has inconsistent residence rules internally¹.

Reference Periods

In addition to residency, several other items on the two surveys differ in their reference periods. For example,

[Usual] hours worked per week, weeks worked per year, and income items on the ACS refer to the 12 months prior to the day when the household filled out the questionnaire, whereas these items on the long form always referred to the previous calendar year (1999 for the 2000 census)².

Similarly, the ACS uses the last 3-months as the reference period for determining school enrollment, while the 2000 Census' long-form inquired about any enrollment since February 1st of that year.

Item Inconsistency

From one survey to another, particular questions may undergo straightforward wording or response category alteration. The use of period estimates, discrepant residency rules, and differing reference periods also impact certain items more than others. The U.S. Census Bureau has provided several tables listing recommendations regarding the comparison of variables common to both the 2000 Census and the ACS survey. Some topics deserving attention when making comparisons across waves include: age and sex, race, Hispanic origin, migration; children, households, and families; income and poverty; and industry and occupation. For additional information, consult the various resources provided by the U.S. Census Bureau³.

Table 2: 2009 American Community Survey 5-Year Estimates

Source Variable Name	Description
B01003001	Total population
B02001002	White alone
B02001003	Black or African American alone

CA 1981-2010 U.S. Climate Atlas
National Centers for Environmental Information

The U.S. Climate Atlas is a tool that contains comprehensive climate information in the United States. The Atlas compiles data from a number of climate stations for the period 1960 to present. This source provides a series of GIS layered data for daily, monthly, and annual averages of climate characteristics for the specified timeframe, and these data show the spatial distribution of the climatic elements. More information on the Climate Atlas can be found at the National Centers for Environmental Information's website: <https://www.ncdc.noaa.gov/about>

A total of six variables in this file were generated using monitoring station data provided by the U.S. Climate Atlas data. To attach these data, the distance from each Wave IV respondent to the nearest 10 climate stations, with a maximum distance threshold of 500 km, was determined. Respondent locations were then assigned U.S. Climate Atlas data from the nearest station with non-missing values.

Variable Description
Mean daily minimum temperature, annually (degrees Fahrenheit)
Mean daily maximum temperature, annually (degrees Fahrenheit)
Mean number of days with minimum temperature <= 32 F, annually
Mean number of days with minimum temperature >= 90 F, annually
Mean total precipitation, annually (inches)
Mean total snowfall, annually (inches)
